ABSTRACTED-PUB-NO: EP 566363A
BASIC-ABSTRACT:

Fastener has a polymer compsn. portion capable of being welded to an object to be provided with the fastener, comprising L-LDPE opt. contg. a minor amt. of LDPE. Pref. the wt. ratio = 95:5-60:40 wt.%, and the M.I. of the compsn. is 1-15g/10 mins..

Packaging bag capable of being opened and closed repeatedly, pref. comprises a bag body fabricated at three end portions and having such a fastener welded to one end portion other than the three end portions of the bag body. Pref. the bag body has, welded to the snap fastener, an inner side layer of L-LDPE. Opt. the bag body may consist of a number of laminated layers of which an outer layer is made of nylon.

USE/ADVANTAGE - Snap fastener enables repeated opening and closing along one side of packaging bags which are useful for contg. items e.g. foodstuffs, pharmaceutical prepns., and haberdashery. Closures for such resealable bags typically comprise a male half-member which intermeshes removably with a female half-member. Base film for the bag may be extruded with the members as part of the profile, but this places constraints on e.g. the type of resin used and the applicability of the process to laminated films. Alternatively the fastener is fabricated separately as a two-piece tape and subsequently adhered/welded to the base film. This method allows a much wider range of variables in construction of the bags and is generally pref.. Good adhesion over wide temp. range.

EQUIVALENT-ABSTRACTS:

Fastener has a polymer compsn. portion capable of being welded to an object to be provided with the fastener, comprising L-LDPE opt. contg. a minor amt. of LDPE. Pref. the wt. ratio = 95:5-60:40 wt.%, and the M.I. of the compsn. is 1-15g/10 mins..

Packaging bag capable of being opened and closed repeatedly, pref. comprises a bag body fabricated at three end portions and having such a fastener welded to one end portion other than the three end portions of the bag body. Pref. the bag body has, welded to the snap fastener, an inner side layer of L-LDPE. Opt. the bag body may consist of a number of laminated layers of which an outer layer is made of nylon.

USE/ADVANTAGE - Snap fastener enables repeated opening and closing along one side of packaging bags which are useful for contg. items e.g. foodstuffs, pharmaceutical prepns., and haberdashery. Closures for such resealable bags typically comprise a male half-member which intermeshes removably with a female half-member. Base film for the bag may be extruded with the members as part of the profile, but this places constraints on e.g. the type of resin used and the applicability of the process to laminated films. Alternatively the fastener is fabricated separately as a two-piece tape and subsequently adhered/welded to the base film. This method allows a much wider range of variables in construction of the bags and is generally

pref.. Good adhesion over wide temp. range.

US 5415904A

Snap fastener comprises a heat resistant welding portion to be welded to an object, comprising a melt index of 1-15g/10 minutes and selected from the group consisting of linear low density polyethylene and a resin blend of linear low density polyethylene and low density polyethylene in a ratio of 95-60 wt. %: 5-40 wt. %.

Pref., the welding portion of the snap fastener is made of the resin blend of linear low-density polyethylene and low density polyethylene. Pref. the welding portion has a thickness of 80-220 microns. An outer side layer adhered to the inner side layer is made of nylon.

ADVANTAGE - Good heat resistance and reliable adhesion are attained.
